

Mehmet Gür

ARTIFICIAL INTELLIGENCE ENGINEERING STUDENT

☎ 05512430106 | ✉ mehmett.gur@gmail.com | 💻 <https://github.com/mehmettgur> | 🔗 <https://www.linkedin.com/in/mehmetgur/>

Education

TOBB Economy and Technology University

Ankara, Turkey

Undergraduate in Artificial Intelligence Engineering

September 2020 - Present

- 4th-Year Artificial Intelligence Engineering Student
- President - TOBB ETÜ AI Club, Board Member - TOBB ETÜ Computer Society
- **Courses:** Computer Programming I-II, Data Structures, Data Science, Probability and Statistics I-II, Artificial Intelligence, Machine Learning, Data Mining, Deep Learning, Image Processing, Biometric Recognition, Natural Language Processing.

Work Experience

Mitas Group

Ankara, Turkey

AI Engineer - Long Term Intern

Sep 2025 - Dec 2025

- Built on-premise AI systems for industrial use cases, focusing on document intelligence, computer vision, and enterprise system integration under strict data-privacy constraints.
- Developed an internal Document Understanding and RAG-based chatbot to enable secure natural-language access to confidential company documents without cloud dependency.
- Implemented computer vision pipelines for industrial safety and worker productivity, detecting PPE compliance and task-level activities in real workshop environments.
- Engineered enterprise automation and SAP integration workflows, including invoice approval processes and ingestion of RPA-generated operational reports via SOAP/RFC.
- **Technical Skills:** Python, FastAPI, Document Understanding, Retrieval-Augmented Generation (RAG), Computer Vision Systems, Object Detection, Segmentation, On-Premise AI Systems, SAP Integration (SOAP/RFC)

SportationAI

Remote

AI Engineer – Part Time

Jan 2025 - Dec 2025

- Developed computer vision models to detect and track players, referees, and the ball in full-match football videos.
- Built multi-object tracking and homography-based calibration pipelines to generate consistent trajectory data mapped to pitch coordinates.
- Structured and optimized vision outputs into RL-ready datasets for Gymnasium environments.
- Trained reinforcement learning agents to simulate realistic match dynamics and support sports analytics applications.
- **Technical Skills:** Python, OpenCV, Gymnasium, PyTorch, YOLO, ByteTrack, Kalman Filters, Homography Calibration.

Jotform

Ankara, Turkey

AI Engineer - Long Term Intern

Jan 2025 - Apr 2025

- Built and compared vector-based RAG and structured Graph-RAG/KAG systems by implementing both architectures and analyzing their retrieval performance for AI agents.
- Developed a semantic-chunking strategy that increased vector-database accuracy on lengthy knowledge-base documents.
- Tuned embedding and search parameters in Qdrant and introduced keyword-aware hybrid re-ranking, improving top-k recall.
- Developed an independent multi-agent AI system, enabling collaborative and modular task execution.
- **Technical Skills:** Python, PHP, Docker, FastAPI, Vector Databases (Qdrant), Graph Databases (ArangoDB), Semantic Chunking, RAG Performance Tuning, Prompt Engineering, Multi Agent Systems (Autogen).

Outlier

Remote

AI Training Coding Expert – Contract

Oct 2024 - Sep 2025

- Working remotely to enhance generative AI models through Reinforcement Learning from Human Feedback (RLHF) by consistently evaluating, correcting, and updating AI-generated code.
- **Technical Skills:** Python, Prompt Engineering, RLHF, Software Debugging, Code Refactoring.

Skills

Python · SQL · Docker · FastAPI · GitHub · Computer Vision · Document Understanding · Retrieval-Augmented Generation (RAG) · Large Language Models · On-Premise AI Systems · SAP Integration · Reinforcement Learning · Multi-Agent Systems

Languages

Turkish (Native) - English (Professional) - Spanish (Elementary)

Projects

Multi Agent Personal Assistant

Created an AI-driven, 11 specialized agent platform with AutoGen and OpenAI LLMs to automate task management, communication, and information retrieval; leveraged AutoGen Studio's real-time UI for real-time workflow visualization.

Multi-Agent Document QA System

Built a multi-agent AI system architecture for document question answering and semantic search, where agents are responsible for document understanding, retrieval-augmented context selection, ReAct-style iterative reasoning, and response validation, coordinating with large language models to generate grounded and reliable answers over unstructured documents in a competitive setting.

AutoRAG – End-to-End RAG Framework for Turkish

Developed a fully local and modular RAG system for Turkish documents, featuring semantic chunking, customizable retrieval/generation pipelines, and Docker-based deployment. Built a Turkish QA benchmark from Wikipedia and conducted extensive evaluations with retrieval and generation metrics (BLEU, ROUGE, BERTScore, Recall, EIR, nDCG) to benchmark embedding and LLM configurations.

Turkish OCR Chatbot (On-Premise)

Developed a Turkish-focused, fully local document understanding and RAG-based chatbot. Implemented document ingestion and text extraction from PDFs and images, and integrated an on-premise LLM (Ollama) via FastAPI to enable document-based question answering. Built a lightweight HTML/JS interface to support conversational interaction in an offline, privacy-preserving setup.

Image Captioning

Built a transformer-based image captioning system using a ViT encoder and GPT-2 decoder, with training on the Flickr8k dataset and evaluation via standard NLP metrics and deployed an interactive Streamlit app for result visualization.

Iris Eye Recognition

Developed a CNN-based iris recognition system on the CASIA-Thousand dataset, combining advanced preprocessing and adaptive training techniques to achieve 92.45% accuracy and 0.023 EER
